SUGGESTED SPECIFICATION

Furnish and install, at locations shown on plans or in accordance with schedules, backdraft dampers that meet the following minimum construction standards: Frame shall be 20 gage (1.0) roll-formed galvanized steel. Backdraft dampers with flange frame, when required, shall have pre-punched mounting holes and welded corner clips for maximum rigidity.

Blades shall be 28 gage (.50) roll-formed galvanized steel. Blade edge seals shall be extruded vinyl, mechanically locked into blade edge. Blade ends shall overlap for optimum weather protection.

Axles and linkage pins shall be stainless steel. Tiebar shall be galvanized steel and concealed in jamb. Backdraft dampers shall be designed for maximum 3000 fpm face velocities. Dampers shall be in all respects equivalent to Ruskin model S3G.

SPECIFIER SELECT OPTION
Electric actuators shall be (24 volt, 120 volt, 220 volt – specifier select one) and shall be factory furnished and mounted or supplied as a kit for field installation.
