

Sound Financial Benefits

CASLink is a cloud-based Building Management System that allows users to monitor and control HVAC, lighting, refrigeration and utilities. Built-in proprietary algorithms provide periodic assessments and recommendations regarding cost reduction measures to optimize building performance.

No monthly fee when maintained by a CaptiveAire Representative

- Provides inherently low financial risk

Scheduling (overnight operation prevention)

Reduce commonly overlooked costs associated with improper operation of equipment

- Improved thermostat settings
- Notifications if appliances left ON unnecessarily
- Avoid equipment running overnight

Demand Charges

- Identify peak energy demand time periods and develop an avoidance

System Fine Tuning

- Reduce heating and cooling costs through verifiable thermostat setback implementation
- Fine-tune kitchen ventilation operational parameters to maximize savings

Feasibility Assessment of Capital Investments

Use real data to assess the feasibility of investing in energy efficiency through:

- Demand Control Ventilation
- Heat Recovery Devices
- Cloud Based HVAC Controls
- High Efficiency Equipment and Lighting

Preventive Maintenance

- Monitor filter status
- Detect equipment malfunctions in real time before they escalate into situations that require more expensive repairs and affect occupant comfort
- Monitor refrigeration equipment and water temperatures to detect conditions

Kitchen Fire System Monitoring

- Continuously monitor all critical fire system components to ensure proper operation in the event of a fire, reducing the potential for human injury and business-crippling losses
