

#### CAPTRATE COMBO FILTERS

## THE MOST EFFECTIVE GREASE EXTRACTION

CaptiveAire's Captrate combo filters use a unique two stage design, first removing and draining large grease particles through the front S-baffle, and then capturing fine aerosol grease particles in the packed-bed of ceramic media. This process provides unparalleled grease removal efficiency and the highest level of fire protection.

#### Unparalleled Grease Removal

- Two stage design removes large grease particles in front S-baffle and then captures fine aerosol particles in rear packed-bed of ceramic media
- Robust design provides the highest level of fire protection and grease extraction in the industry

#### Efficient Front-End Capture

- Reduced operating costs due to decreased hood/duct cleaning, fan replacement, and roof repair
- Significantly reduced fire risk due to reduced fuel (grease) throughout the system
- Cleaner ducts, exhaust fans, and exterior surfaces (roofs, walls, pavement, etc.)
- Reduced odor due to reduced grease

#### Hassle-Free Maintenance

- Lightweight and easy to remove by kitchen staff
- Simple daily cleaning via dishwasher or soaking in commercial degreaser
- Tough stainless steel construction holds up to rough handling
